

CVINGER

Pred vstopom v naselje

Pred vami so ostaline nekdanje mogočne utrdbene konstrukcije, ki obdaja gradišče na Cvingerju. Postavljena je bila tako, da je kar najbolje izkoriščala naravno obliko terena (vrtače in robove teras).

Ob vznožju nasipa je ponekod še viden plitev jarek. Ta je nastal zaradi kopanja zemlje in klesanja kamna, ki so ga potrebovali za gradnjo obzidja. S tem so dodatno povečali višinsko razliko med zunanostjo in notranostjo naselja ter hkrati dvignili naklon klančine pod obzidjem.

Naselje je imelo najverjetneje dva vhoda, pri čemer je imel južni precej pomembnejšo utrdbeno in funkcionalno vlogo. V naselje torej vstopate skozi prvoten vhod, ki je bil na tem mestu zgrajen že pred več kot 2500 leti.

The Approaches to the Hillfort

The once mighty fortifications that encircle the hillfort on Cvinger stand before you. They were erected in such a way as to take full advantage of the natural relief of the hill (dolines and edges of terraces).

A shallow ditch can still be seen in some places at the foot of the rampart. This was created by the extraction of earth and stone for the construction of the ramparts. This also served to increase the difference in height between the exterior and interior of the settlement as well as increasing the angle of the slope below the ramparts.

The settlement in all probability had two entrances. The southern entrance played a much greater defensive and functional role. Thus, entrance to the settlement is made through the original entrance, which was built here over 2500 years ago.
